

Titanic Dataset - Exploratory Data Analysis

Exploratory Data Analysis Report

Titanic Dataset

Titanic Dataset - Exploratory Data Analysis

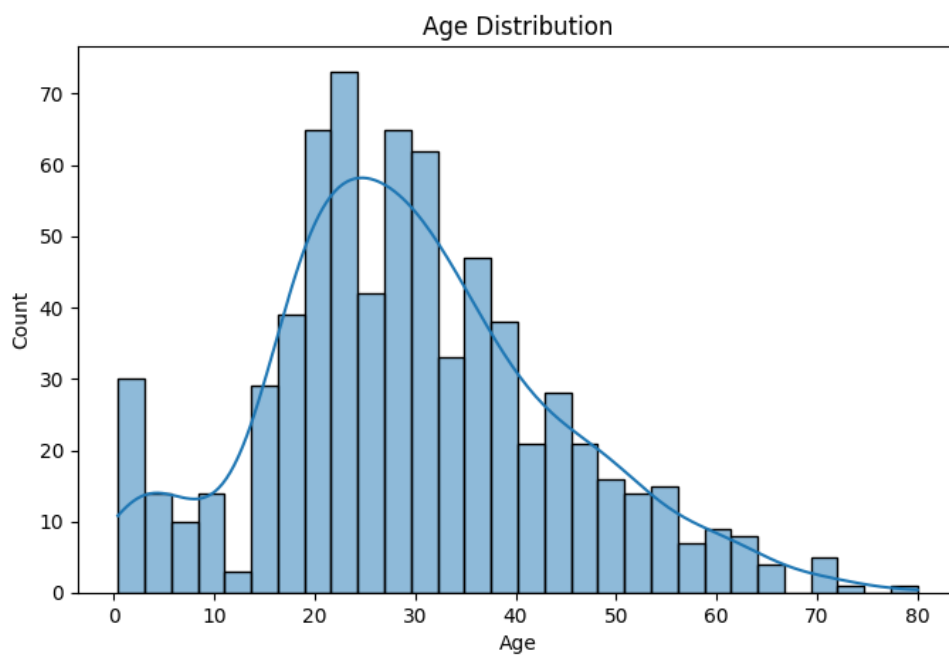

1. Dataset Overview

Total Rows: 891

Total Columns: 12

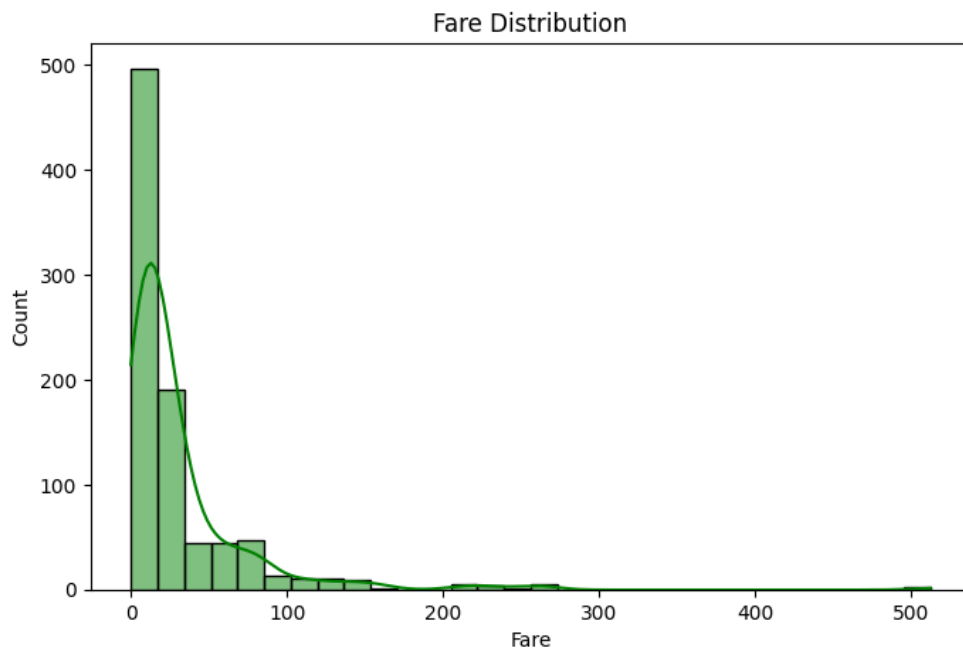

This dataset contains passenger details like age, gender, fare, class, and survival status.

2. Univariate Analysis

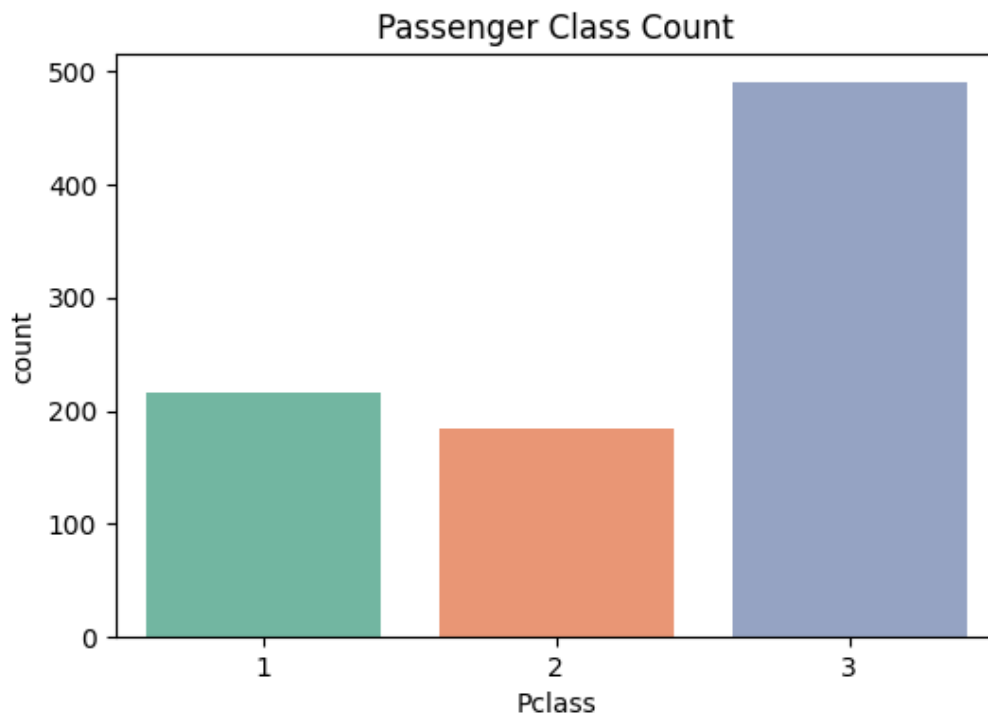

Most passengers were between 20-40 years old, with fewer elderly passengers.

Titanic Dataset - Exploratory Data Analysis

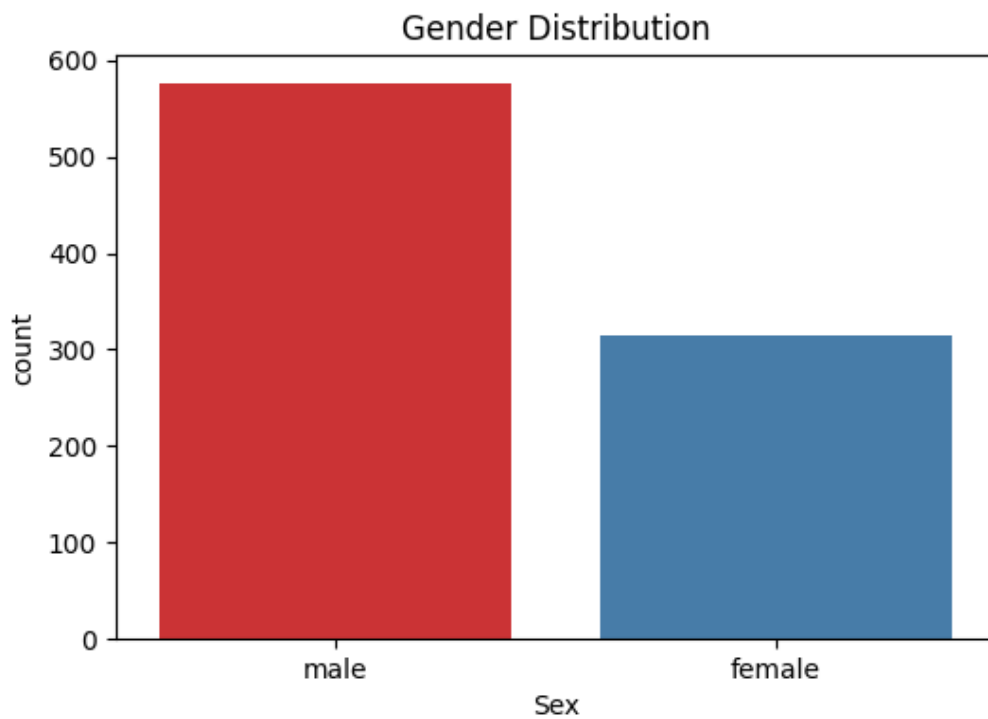

Fare distribution is right-skewed, with some very high outliers.

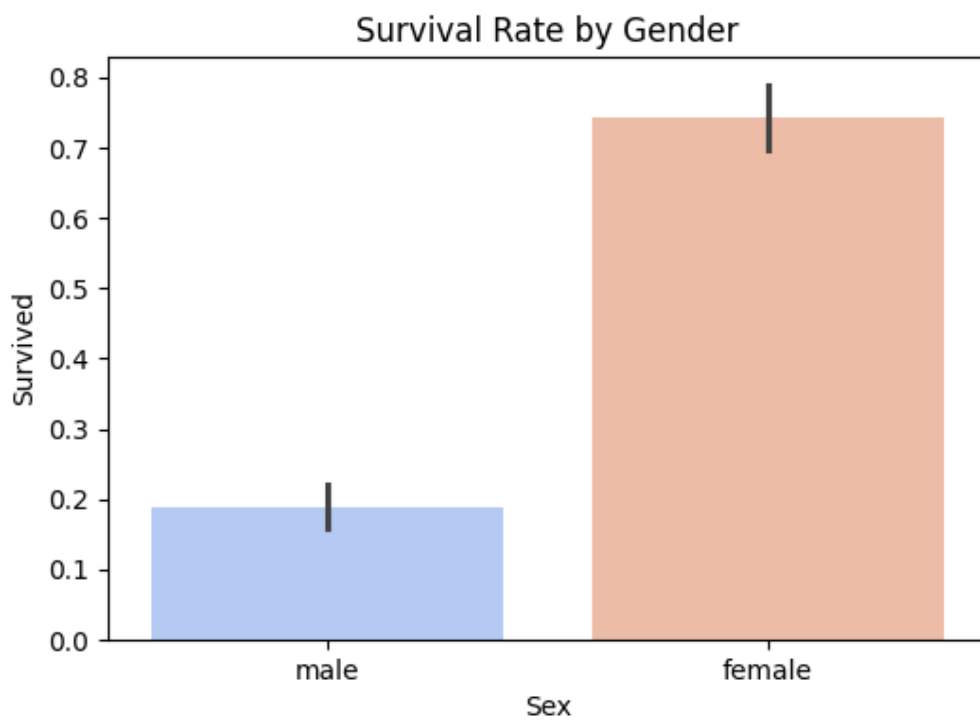

Third class had the most passengers, followed by first and second class.

Titanic Dataset - Exploratory Data Analysis

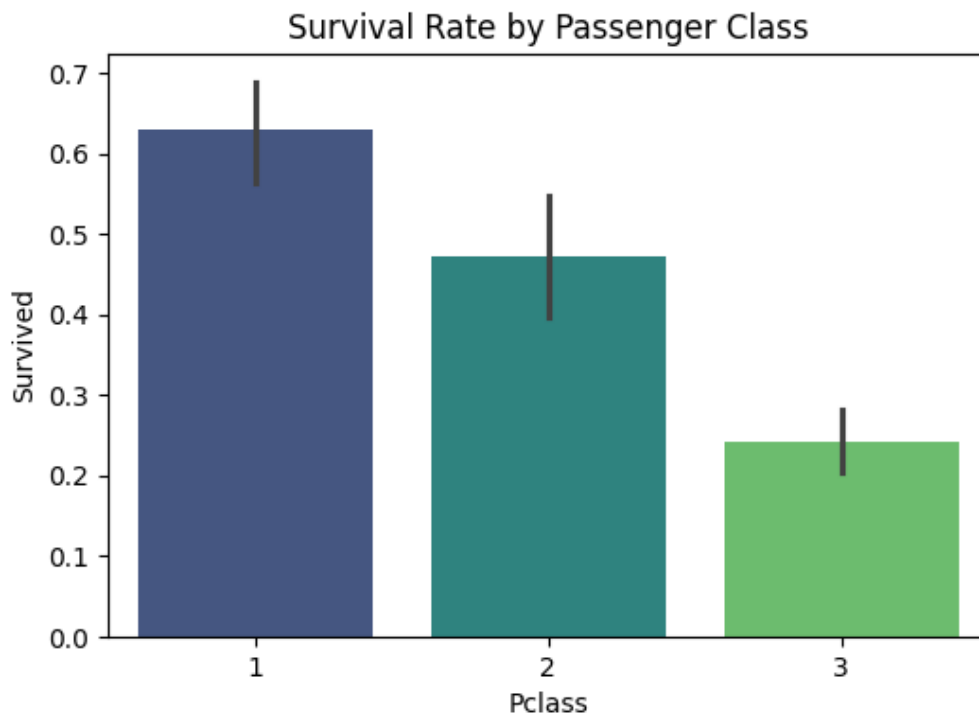

There were more male passengers than female passengers.

3. Bivariate Analysis

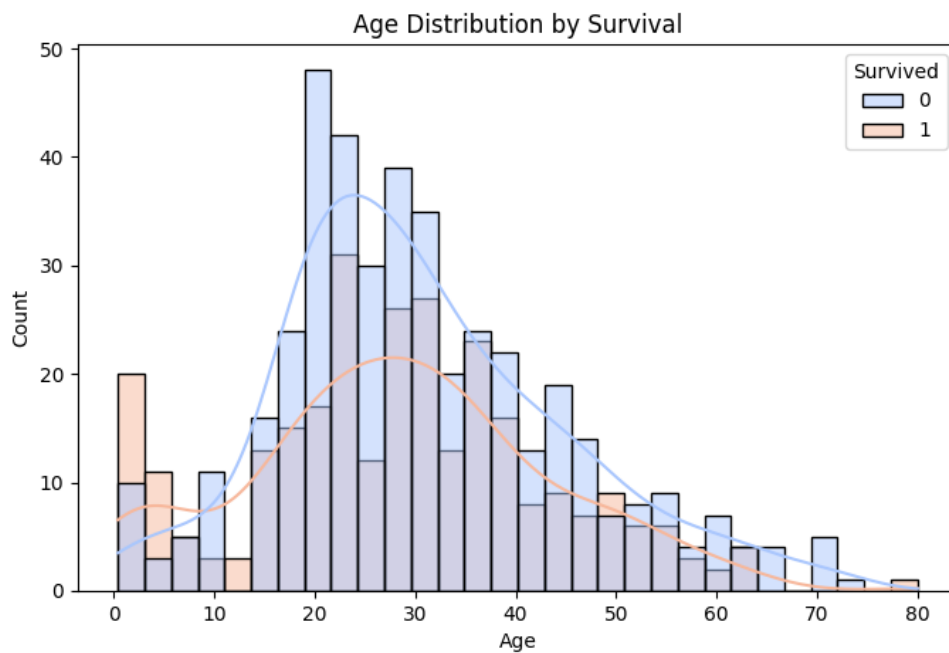

Titanic Dataset - Exploratory Data Analysis

Women had a significantly higher survival rate than men.

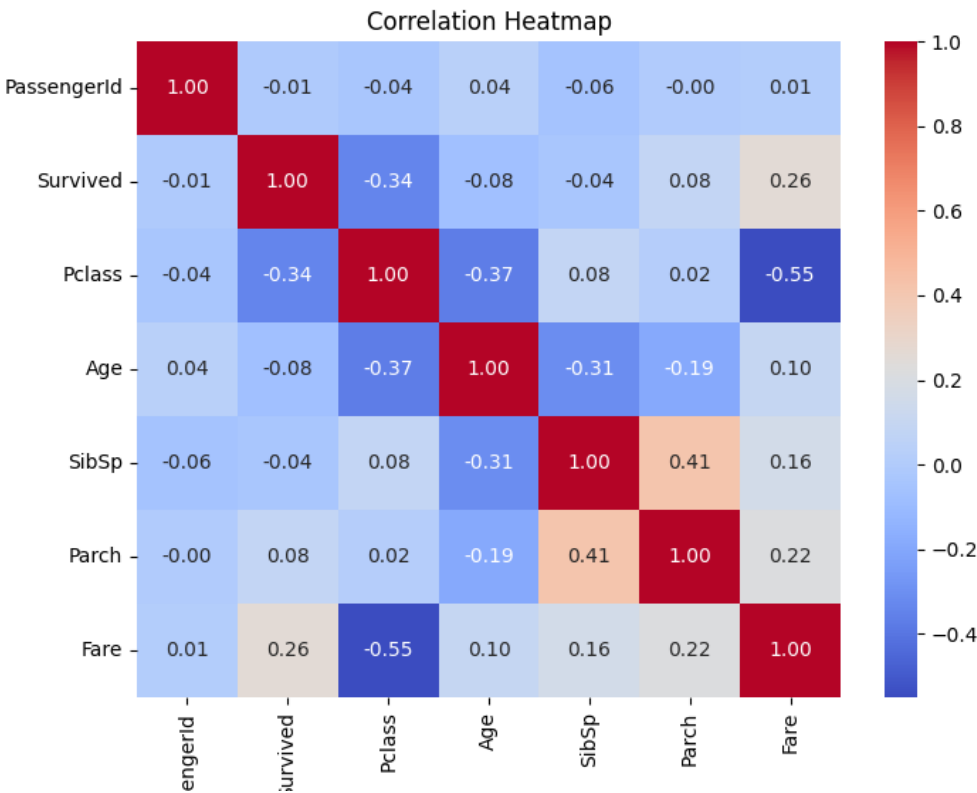

First-class passengers had the highest survival rate.

Children and younger passengers had slightly better chances of survival.

Titanic Dataset - Exploratory Data Analysis

4. Correlation Analysis

Passenger class and fare are strongly correlated. Survival shows moderate correlation with gender and class.

5. Insights & Conclusion

- Women had higher survival chances.
- First-class passengers were more likely to survive.
- Fare and class strongly influence survival chances.
